

CRIME VIEWER EDITION

FEATURES

- Search Crime (RMS) database by type, spatial, and temporal criteria
- Crime detail reports with dynamic spatial indexing
- PDF Crime Reports with integrated map and crime data summaries
- Multiple location based searching tools
- Simple wizard-based crime search interface
- Easy wizard-driven configuration, and management
- Robust GeoPrise mapping application interface tools
- Fully integrated with ESRI's ArcIMS® v9.2

Quality of life. Economic revitalization. Community prosperity. These are the primary factors which will ultimately determine the success or failure for all local municipalities. Perhaps the biggest impediment towards achieving this crucial success is criminal activity. Since most criminal acts are not geographically random, and the most beneficial tool for combating crime is the rapid access to accurate incident mapping, GeoPrise.Net has developed advanced query, display, and report generation tools for geographic assessment to aid in the targeting and reduction of these offenses.

Queries based on type of crime, location (whether it be an offender address, jurisdictional boundary, or known landmark),

or a temporal component, yield invaluable information for the more effective allocation of police resources as well as providing trend analysis for policy makers to further augment economic development.

With the advent of its distinctive Crime Viewer Edition, GeoPrise has provided a focused enterprise solution for law enforcement, policy makers, and local citizens alike, to more effectively combat this ever growing problem. Based upon ESRI's ArcIMS® and ArcGIS® Server technology, GeoPrise.Net Crime Viewer Edition integrates its core product functionality with enhanced query and analysis tools for the rapid display of criminal incidents and hot spot determination.
