- Easy wizard-driven configuration, and management
- Robust GeoPrise mapping application interface tools
- Fully integrated with ESRI's ArcIMS® v9.2

**A**ttracting new investments is essential for the advancement and strengthening of the economic base of communities. It requires collaboration among government agencies in new and powerful ways.

GeoPrise.Net Economic Development Application (EDA) is a powerful internet-based tool for researching commercial development sites in an out-of-the box and easy to use solution. EDA automates the analysis and selection of regionally available properties in a fraction of time compared to other methods. Property characteristic queries, coupled with proximity analysis,

demographic data reporting, and business data reporting are performed in an efficient manner that allows fast response to prospective developers and businesses seeking to locate a business site.

Whether searching properties by price or type, or seeking sites near a specified location, or when detailed demographic data is required, Geoprise's economic development tools help to put this information and these capabilities in the hands of investors quickly and with minimal effort.

The screenshot displays the GeoPrise Economic Development Application interface. On the left, a 'Property Search' panel allows users to filter properties by Sale Price (Min/Max), Lease Price (Min/Max), Square Footage (Min/Max), Type, Status, County, and City. The main window shows a map of a city area with a red circle highlighting a specific location. To the right, there are three panels: 'Demographics' showing a table of demographic data, 'Biz Data' showing a table of business data, and 'Photos' showing a photograph of a building. The interface is titled 'City of Pittsburg California'.

Applications may be installed on your servers or Hosted at the world class GeoPrise data center
